

ACE Release Notes

ACE v1.30 Update – v1.30.3311.1463

New Features

- N/A

Improvements

- Diagram routing algorithm updates to address some rendering bugs observed in plug-in corner cases.
- Minor performance improvement when layout out wire routes.
- Legacy wire routing is maintained for backwards compatibility, but new plug-ins can be released with updating routing mechanisms to disable the auto hide feature for wires / net connectors.
- All diagram connectors are now set to “Free” as standard to avoid unnecessary noise in debug information.
- Script node toolbar minor UI updates to improve iconography etc.

Fixes

- Fix for issue script parsing that resulted in early escape character recognition that affects some transactions with parameters.
- Fix for an issue where wizard step visibility was not updated
- Fix for issue in switch block where the lever arm would not render after the initial position was changed that affects both switch blocks.
 - SPDTS
 - SPSTS
- Fix for widget block where the widget was not displaying correctly in new diagrams, the default widget for the type was always shown and could not be updated.
