

ACE Release Notes

ACE v1.29 has Released

New Features

- Added support for alternate plug-in package feeds from Azure as well as maintaining the main feed from MyGet, see - [Alternative Package Sources Wiki](#)
- Migrated to alternate metrics collection project and added metrics to track in-app tool usage (only affects opt-in users)

Improvements

- Major overhaul of IIO plug-in support
 - Removed WCF Wrapper Process
 - Moved Libiio support into an IIO plug-in project
 - Improves discovery and stability of IIO systems
- Improved logging of info/error message when attaching hardware in ACE
- Improved reported error messages from scripting exceptions
- Added improved error messages in plug-in manager if plug-in feeds fail to load
- Added link to [Alternative Package Sources Wiki](#) in-app if errors occur in main feed
- Added virtual controller property for better support without hardware
- Updated remote client transaction list to support new capture transactions

Fixes

- Macro command parsing bug for parentheses fixed
- Errors recorded for custom spurs now appear in events window
- Fixed vector generator wizard width bugs
- Fixed bug with the Iterate capture remote transaction command
